

Sterile Services Technicians – Biomet UK Healthcare Ltd
Location: Bridgend, South Wales

Biomet is one of the global leaders in the orthopedics market. Biomet manufactures, markets and distributes high quality and high-tech orthopedic products such as knees and hips, biomaterials, bone cements and surgical instruments. Biomet operates in more than 90 countries worldwide and has 16 manufacturing sites. With more than 7,500 team members, Biomet generates over \$2.8 billion annual sales. Biomet is committed to its customers, their patients, and to our team members. Approximately one million times per year one surgeon treats one patient using our products somewhere in the world. In everything that we do, we act as if that one patient is a member of our own family and we manage our business accordingly.

These appointments form part of our fundamental commitment to customers and patients. The decontamination of medical devices is a critical service in the delivery of patient care. The post holders will be part of a multidisciplinary team which is responsible for the preparation, quality assurance, sterilisation and distribution of surgical instruments to operating theatres. The successful candidates duties will include Collection, Disassembly, Washing, Inspection, Packing and Sterilisation of contaminated medical devices, whilst critically, complying with all legislative documentation and instructions.

Candidates should have proven experience in a sterile services environment and in possession of or working towards qualification in Decontamination. Candidates should have basic computer literacy skills along with proven team working and communication skills.

To apply, please send your CV to Rhiannon Davies at Rhiannon.Davies@biomet.com, HR department, Biomet, by 29th February 2012.
